

Case Study

Chiltern Way Academy, Buckinghamshire

With a great new school opened for primary aged children, Chiltern Academy recognised a need for climbing and swinging equipment and HAGS provided the right solution.

A need for vestibular and proprioceptive stimulation

Chiltern Way Academy recently opened as a new school for primary aged children with behavioural issues. It was established early on that the pupils would need somewhere to climb and swing on the school site and 3 companies were asked to provide proposals for the site.

Working closely together to meet the children's needs

A close liaison with HAGS resulted in a carefully planned proposal which matched the school's needs closely, fitting in with both their budget and ideas.

Paul Brown, Assistant Facilities Manager, commented: "throughout the whole tendering process we felt that the HAGS play equipment was the closest to match our needs. The site rep was always very helpful and worked to our budget, allowing us to bounce different ideas for what we required and how it would work as a play unit."

Impressive Implementation

Once on site, the HAGS team smoothly integrated any changes and Paul praised the team:

"Throughout the whole process we were kept up to date with how things were progressing. Any changes to budget and design were received with an excellent "not a problem" attitude. The project was started and completed on time. A special mention to the site installation team who were fantastic whilst there, worked quickly and professionally, and interacted well with the pupils if the need arose."

Project value: £25,000

Address of site: Berton Hill Campus,
3 Berton Road,
Aylesbury, Buckinghamshire
HP20 1EE
